

Ratification of the Kigali Amendment will support the South Dakota Economy

Industries based on fluorocarbons play a large role in the U.S. economy. The technologies used by these industries across the globe are signature American innovations. Fluorocarbon-based manufacturing industries in the U.S. directly employ 589,000 Americans, with an industry-wide payroll of more than \$39 billion per year.

The Kigali Amendment will create 33,000 American jobs in less than 10 years, and will generate \$3.0 billion in additional labor income. These jobs and investment are in jeopardy if the U.S. government fails to act.

We must maintain American leadership in fluorocarbon product manufacturing.

How ratification of the Kigali Amendment will help South Dakota:

American Leadership:

- The amendment enhances America's place as a leading global supplier of HVACR products by providing a flexible and predictable implementation mechanism for recent amendments to the Montreal Protocol, giving U.S. HVACR companies and workers the opportunity to reap the benefits of American technological advances.

Jobs & Manufacturing:

- Alliance members directly employ 391 employees in the state of South Dakota.
- HVACR upstream- downstream employment: 1,714 employees in the state of South Dakota.

Alliance Member Companies in South Dakota:

- Honeywell, Olin, Lennox, Johnson Controls
